Company Profile:

The **Center for Neurotechnology Studies (CNS) of the Potomac Institute for Policy Studies** is directed by **Dr. James Giordano**. CNS provides neutral, in-depth analysis of matters at the intersection of neuroscience and technology—neurotechnology—and public policy. The Center anticipates ethical, legal, and social issues (ELSI) associated with emerging neurotechnology, and shepherds constructive discourse on these issues. It provides a forum for reasoned consideration of issues both by subject area experts and by the public. The Center partners with the research community for discourse and consultation on ethically sound neurotechnology research and applications.
